

Cybersecurity Domains Assignment

Penetration Testing

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Digital Forensics

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

SOC Analyst

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Malware Analysis

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Threat Intelligence

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Cloud Security

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Network Security

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Application Security

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Governance, Risk & Compliance (GRC)

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.

Red Team / Blue Team Operations

Definition: This domain focuses on protecting systems and identifying security weaknesses.

Key Responsibilities: Monitoring, testing, and securing systems.

Technical Skills: Networking, Linux, security tools.

Soft Skills: Problem-solving, communication, teamwork.

Tools: Wireshark, Metasploit, SIEM tools.

Certifications: CEH, Security+, OSCP.

Career Path: Entry-level to senior security expert roles.
